Profile

I am a self trained frontend web developer. I am fascinated by Web technologies and programming languages. I have Studied Python Programming with three certificates. Not only that, but I also made few websites for myself and exercised the programming languages that i have studied like JavaScript, HTML and CSS. Since January, I got a wonderful opportunity to be a Mendix developer. Mendix is the future platform for website technologies with a multi functionality and flexibility platform. I am so passionate to learn and to show my skills in teams and add values.

Motopp Mendix Advanced Developer Accelerator Program

2022

We have been taught to use the Mendix platform. We have built a Mendix app from scratch, where we had to collaborate with a Product Owner to finalize the requirements and convert those into a working and business/user centric application. While executing the project we have joined several Mendix courses and lectures for further knowledge extension. Which was directly put into practice in their Mendix project.

- Certification
- Agile working
- ALM
- Team Server
- Versioning
- Branching
- Domain modelling
- Data normalization

- Security verification
- Account handling
- Front-end development
- Page building
- Data binding
- Styling
- Microflow modelling

- Data processing
- Data generation
- Querying
- Integration Rest, Excel, filing
- Modelling best practicing
- Process modelling
- Action orientated modelling

Voluntarily Jobs

* Education Runaway(https://educationrunway.nl/nl/) board member.
* Computer and Smart phones installation/Maintenance.
* Translation language from Tigregna to Dutch/English.
* Basic computer Training for Eritrean Residences in Hilversum

My Background

I came to The Netherlands around 2013. I had a long Asylum procedure
and It was a rough time to accomplish my dreams. At Asylum seekers center
i have been helping on translating and teaching other refugees a basic
computers skills. Since 2018 i got my residence permit and my life got back
on track. I started learning Dutch and focused on self studying (web develop
ment) and related ICT technologies While i am doing self development;
I started to look for a new, promising field in which I would take great
pleasure to improve myself and where i could build something. And as the
great chance of my life, I met Motopp. Mendix is exactly what I was looking
for and started my journey on 2022 as Mendix Developer.

"In the middle of difficulty lies opportunity" —Albert Einstein
